Race:		
White	80%	
African American	66%	
Hispanic	55%	

Methodology

Generation Rx.com is a nationally representative, random sample telephone survey of 1209 young people ages 15-24, with an oversample of 200 non-white respondents. The data were weighted by gender, age, race and region, to ensure the results are representative of youth 15-24. The questionnaire was translated into Spanish so that respondents who chose to could complete the survey in Spanish.

The survey was designed and analyzed by staff of the Kaiser Family Foundation, in consultation with International Communications Research. Fieldwork was conducted by ICR by telephone between September 24 and October 31, 2001.

The survey includes a total of 1209 respondents ages 15-24, including 1072 identified as "online youth" (those who have ever gone online) and 820 identified as "online health seekers" (those who have looked up health information on the Internet).

The margin of error is plus or minus 2.9 percentage points for the total sample, plus or minus 3.0 percentage points among the online youth, and plus or minus 3.5 percentage points among the online health seekers.

Additional copies of the survey report (#3202) are available for free online at: www.kff.org, or by calling the Kaiser Family Foundation's publication request line at 1-800-656-4533.
